7 Reasons why Australians MUST say: I DO NOT CONSENT!

Why you should take action to protect yourself NOW

If Australians do not tell the Government 'I DO NOT CONSENT' to two new treaties from the WHO, the Government will take their consent for granted. Together these treaties – 2024 Amendments to the International Health Regulations (2005)[1] and Pandemic Agreement (2025)[2] – will cost us dearly.

1. The treaties will cost Australia billions of dollars annually.

2. They allow authorities to restrict Australians' freedom by:
    - imposing lockdowns
    - enforcing travel restrictions
    - censoring scientific debate
    - incarcerating Australians
    - imposing medical treatments on Australians, and
    - implementing any other measure the WHO deems appropriate.

3. They allow authorities to mandate the taking of pharmaceutical drugs and genetic treatments, whether or not they have been proven to work, are necessary or Australians want them.

4. They were developed by the WHO, which allows pharmaceutical interests to influence global health policy.[3]
    - WHO offers investors a 3,400% return.
    - WHO accepts money directly from pharmaceutical companies, contrary to its Guidelines.
    - WHO accepts money from pro-pharmaceutical businesses and organisations, contrary to its Guidelines.
    - WHO allows donors to stipulate how the WHO is to use their funds.
    - WHO accepted $2,798,329,167 in donor-influenced funding from the WHO's top-100 voluntary donors *alone* in 2022-23.
    - WHO cannot act in favour of both corporate interests and public health.

5. WHO and the pharmaceutical industry are indemnified to protect themselves, but not the public, from harm caused by their products.[4]

6. Australians suffered enormously from the WHO'S approach to managing global health during Covid-19 which led to:
    - business closures
    - job losses
    - school closures and learning setbacks
    - economic loss
    - mental health problems and suicide
    - domestic violence and
    - massive government expenditure, inflation and increased cost-of-living. [5]

7. Countries that recently withdrew from the WHO are Argentina and the US, whose Health and Human Services Secretary, Robert F. Kennedy, said, 'Like many legacy institutions, the WHO has become mired in bureaucratic bloat, entrenched paradigms, conflicts of interest, and international power politics'.[6]
